## KAPAKLI VE SİLİKON CEPHE SİSTEMİ DERZ PROFİLİ MONTAJ DETAYI

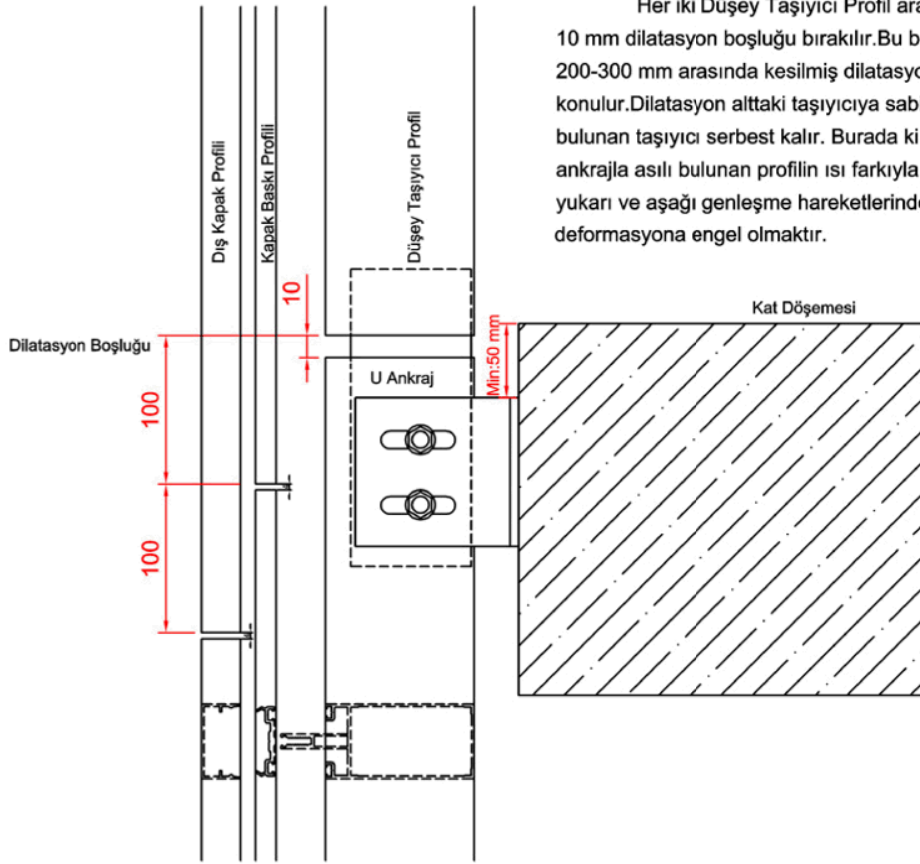

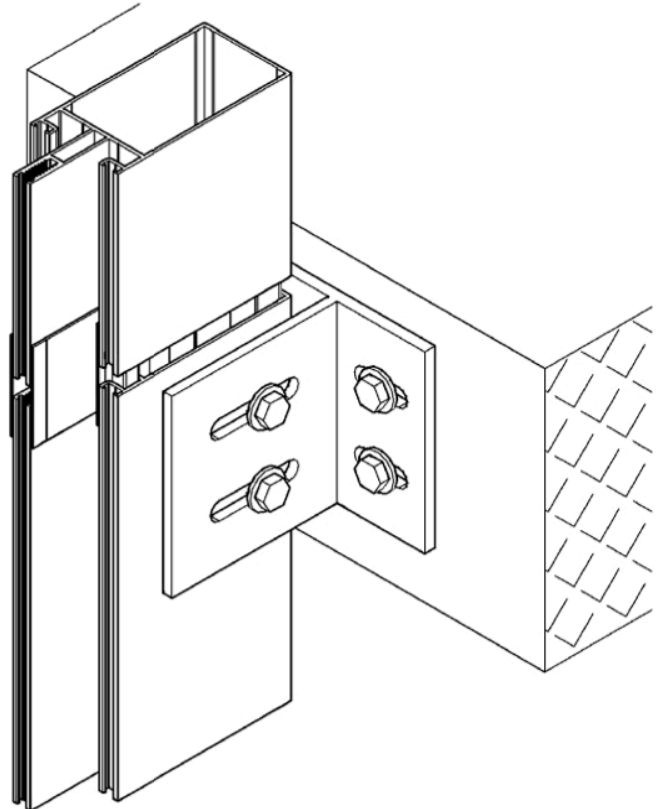

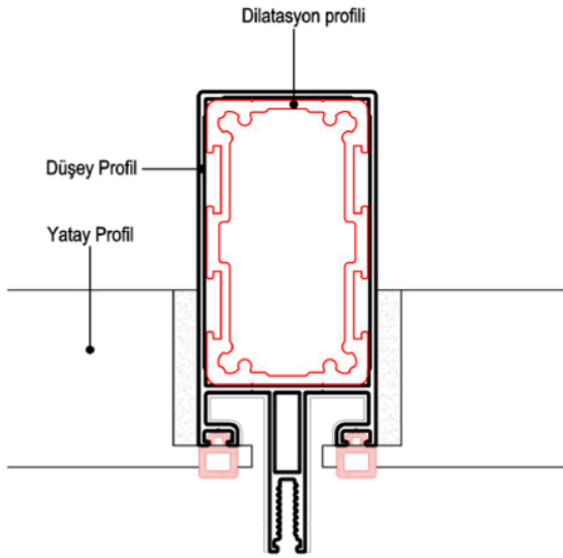

## KAPAKLI VE SİLİKON CEPHE SİSTEMİ DÜŞEY BAĞLANTI DETAYI

Her iki Düşey Taşıyıcı Profil arasında 10 mm dilatasyon boşluğu bırakılır. Bu boşluğa 200-300 mm arasında kesilmiş dilatasyon profili konulur. Dilatasyon alttaki taşıyıcıya sabitlenir üstte bulunan taşıyıcı serbest kalır. Burada ki amaç üstten ankrajla asılı bulunan profilin ısı farkıyla oluşan yukarı ve aşağı genişleme hareketlerinden dolayı deformasyona engel olmaktır.
